

# Compound-Pressure Switches

SZ□□□BR、SZ1/10BRF-X15 (SPDT) / SZ□□□BRW (DPDT)

## Features

- The compound-pressure switches can be used from a vacuum range to a positive pressure range. They can be set within vacuum range only, from vacuum to positive pressure ranges, or positive pressure range only.
- The atmospheric pressure (gauge pressure = 0) can be also set.
- A high quality phosphor bellows is adopted as a pressure sensing element.
- The compound-pressure switches can be used for various pressure medium such as air, water, oil, gases and steam.
- CCC approved  
(Please note that CCC certified switches is not available for the with pilot lamps).

- Fixed differential (dead band) types are available for each model equipped with SPDT or DPDT micro switch.
- The differential (dead band) of the fixed differential (dead band) type is less than or equal to the minimum value of the adjustable differential (dead band) models.
- A SUS316L bellows is available for SZ1/10BRF-X15 only.
- The set point must be within the range.

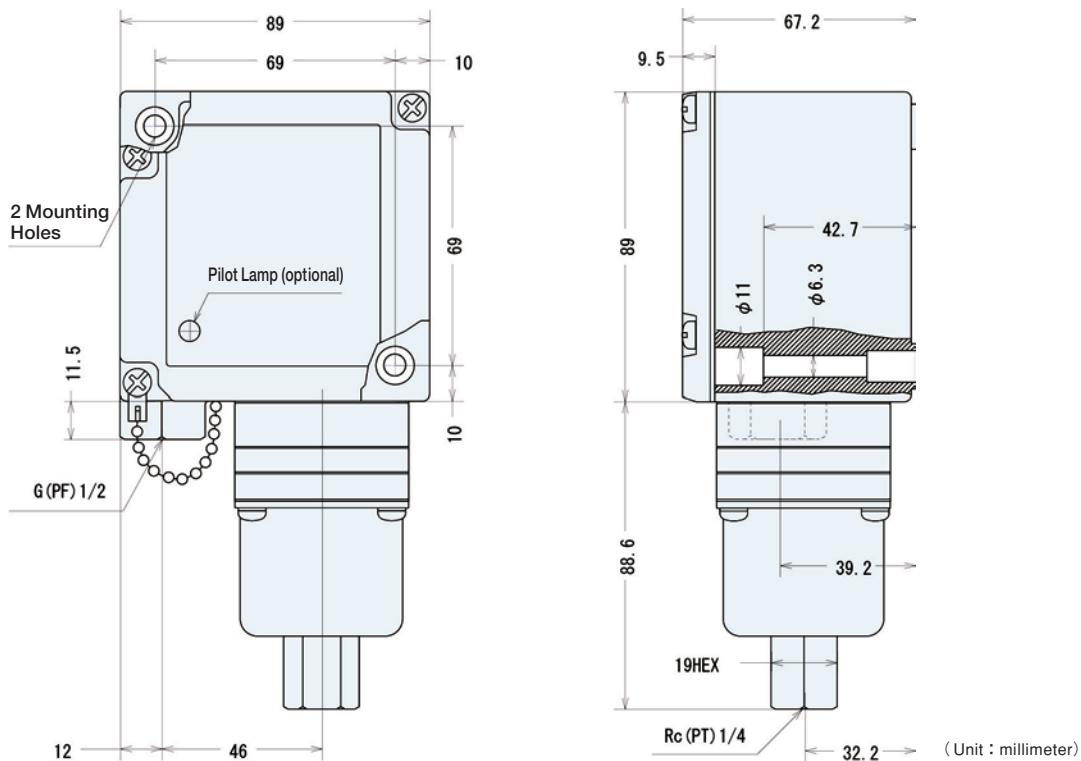

\* Only SPDT (C contact) is available. An optional pilot lamp can not be equipped.
